# Hosting
## Your presence online

Whether you want to start a blog, forum, picture gallery, company website or an eCommerce application, you need to have a server to host those bits and bytes that compose your web presence on an Internet server.

We allow people to make their website accessible via the World Wide Web. We have solutions for any requirement, from the most basic webpage hosting to the largest high-available, high-performance eCommerce system.

## Offers

- **Shared Hosting on Plesk Panel**
  Best suited for basic sites with no special requirements

- **Managed hosting on shared custom Web server**
  Best suited for applications that may need server level customizations

- **Managed hosting on dedicated server (physical or virtual)**

- SSL Support

## Templates

The quality, diversity and user-friendliness of Open-Source content management solutions has improved greatly over the past years and even big Fortune 500 companies are using Drupal, Joomla, Wordpress and the likes on their main website. We can help you along by installing an Open-Source solution into your hosting package and even install custom themes or extensions to your liking.

## High-Availability and Backup

Even the most basic web service is hosted on our Mbox platform which ensures for maximum performance and availability by default. No single point of failure will have your website offline for hours or days. Also, thanks to a continuous backup cycle, your data is always available. If your website is hacked or defaced following a weak password or an exploit in some open-source software, we can easily recover your website from a backup to have you up and running again in the smallest timeframe possible.

## Support

If you have trouble with setting up your hosting, migrating to our service or the simply is something not working right, contact our support for assistance. Our team of sysadmins and developers can help you figure out and fix the problem and optimize to make sure it doesn't happen again.
